

**Whilst being effective in keeping samples cool, the picnic cool box is, regardless of how well packaged, notoriously bad for the secure transit of samples contained in glassware.**

ACS Environmental Testing Ltd has sought to mitigate the risks associated with the use of picnic cool boxes when used for the transport of environmental soil and water samples.

**The ACS Environmental Testing Ltd  
STB (Sample Transit Box )**

The STB is a secure and stable box designed to hold sample containers securely inside the without the requirement of additional packaging.

Manufactured from a Corex corrugated plastic the STB is very robust. Box dimensions are (w)420mm x (d)310mm x (h)300mm. Handling is made easy by the two 'comfort', webbing handles which are attached to either side of the box. The STB is fitted with a set of interchangeable foam inserts, these inserts come in 3 different form's especially designed to accept industry standard glassware, when the inserts are married together a rectangular shape is formed in the centre to accept one or two cool packs.

**The STB with 2 x foam inserts to accept 500ml, 250ml, 180ml, 120ml & 40ml vials. Inserts are interchangeable to any configuration.**

The box also contains a foam lid which fits over the base inserts, a chain of custody form is enclosed and on the reverse side is information advising on appropriate usage of containers for specific tests etc.

**How it works**

When requesting Cool boxes and sample containers, ACS Environmental Testing Ltd will provide either the exact requirement to match a quoted contract or, for client stock purposes we will provide boxes with a mixture of inserts based on the types of sample containers requested, these inserts can be easily interchanged by the client to match the day's sampling requirement.

**The STB with 1Ltr Amber bottles, 40ml Vials & Cool pack**

Customers can now be confident that samples dispatched to ACS Environmental Testing Ltd in the STB will get to the Laboratory in an unbroken and fresh condition.
